

# myKN

myKN is an intuitive platform that gives you full control of your shipments. With a suite of collaborative features, myKN will modernise the way you manage your sea, air and road logistics.

Shipping your products to customers is a challenging process. You can gain an advantage by choosing modern, innovative ways to manage your shipments. At Kuehne+Nagel, our logistics specialists have designed myKN to give you complete control at every step of the journey.

## Explore

Before you ship, you want to know all your sea transport options. What's the quickest trade lane for your shipments? Is there a more sustainable shipping option for low-priority shipments? Using myKN's Explore feature, you can check sailing schedules, live vessel tracking, as well as ratings for transit time, reliability and CO2 emissions. This is accurate information that you can rely on, provided by leading ocean carriers and overseen by logistics experts.

## Quote

Receiving quotations often involves making calls, preparing emails or filling in forms. This is time-consuming and can result in inaccurate estimates. With myKN's Quote function, you receive instant quotes on all-in costs. You can generate a quote at any time, from any device. This allows your team to quickly arrange quotes and share information. Simply enter your destination and origin and receive all-in quotes that you can book right away, or save for later.

## Book

Once you've decided to book the quote, you can do so directly from myKN. This transforms the traditionally inefficient process of booking freight. Avoid delays and costs by using myKN's Book function. Use your saved quotes to make a booking at any time of the day. You'll free up valuable resources, save time and simplify your delivery planning. Your customers will notice the improvement.

## Track

With so many shipments underway, it's cumbersome to constantly micromanage their status and share this information with your colleagues. myKN's Track feature ensures that you can receive shipping status information at any time and from anywhere. In fact, your whole team can easily access this information from any device. Use your own references to quickly find your shipments, and easily access the shipment-related commercial and transport documents. You can also set up and work with personalised overviews and detail views, according to your preference.

## Collaborate

What happens when you have extra information to add once your shipment is underway? Just because your booking is made, doesn't mean the process is over. myKN is designed as a platform for collaboration and interaction. More than just an EDI or API connection, with myKN's Collaborate feature you can provide further references, add status information and upload documents such as commercial invoices and packing lists. This means that even during shipping, you stay in full control and can set priorities, give approval and provide or adjust your forwarding information.

## Control

As well as managing individual shipments, you also need to stay aware of your overall supply chain. myKN's Control feature proactively supplies you with confirmations on important events and exception alerts e.g. on service disruptions or transport plan changes. You will receive an early warning and can adjust your downstream processes in a timely fashion to avoid extra costs. You can analyse the performance of your supply chain, such as volumes, freight spend and CO2 footprint, as the basis for further optimisation of your processes and costs. Optimise your costs and processes through improved transparency on current status including event confirmations, exception alerts and tableau reports. From the smallest details through to overarching trends, myKN keeps you informed and in control.

### Your business will benefit from these innovations

When you need to simplify your logistics processes while maintaining complete control, choose myKN. With over 130 years of experience, the specialists at Kuehne+Nagel understand what you need and have designed myKN to enhance your workflow. In a world of uncertainty, myKN empowers you to control tomorrow's deliveries, today.
