

Secured Energy Plan (SEP)

Fixed price agreement
to gain long term budget security

Secured Energy Plan

To counterbalance price risks associated with the volatility of the fuel market, Kuehne+Nagel offers the Secured Energy Plan (SEP).

The Secured Energy Plan (SEP) guarantees the energy costs for a certain number of TEUs for a defined period in the future, reflecting the consumption of Very Low Sulphur Fuel Oil (VLSFO) per trade lane.

By utilising the Secured Energy Plan, energy costs are predictable and budget security is assured.

Forward Price X Trade Factor = Secured Energy Price

Components of the Secured Energy Plan (SEP):

Fixed price: Secured Energy Plan (SEP) guarantees energy costs for defined, long term cargo volumes. The fixed energy price will be charged after the shipment took place. If the committed cargo volumes are not provided as planned, 30% of the secured energy costs will be charged after the intended shipping date.*

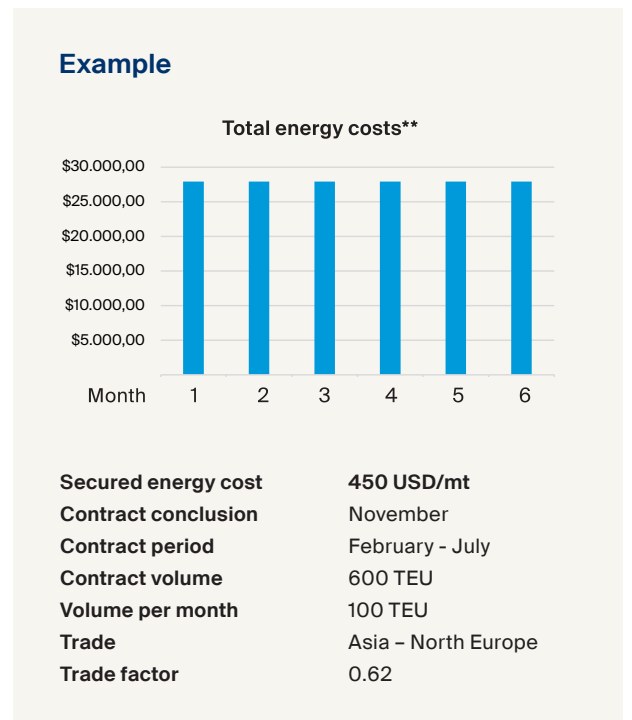

Cargo commitment: The minimum volume is 300 TEU or a consumption of about 100 mt VLSFO.

Trade factors: Carrier neutral trade factors reflect the energy consumption of all possible connections on a specific trade lane. The values are constantly monitored and adjusted by Kuehne+Nagel's sea freight experts and include distance, utilisation, speed, equipment repositioning and trade imbalance.

Flexible timing: The Secured Energy Plan (SEP) is available for contracts starting at any time in the future with a duration of 3 to 24 months or longer.

* Subject to credit check. Prepaid options are available.
